ContainerDays Hamburg Recap

What's new?

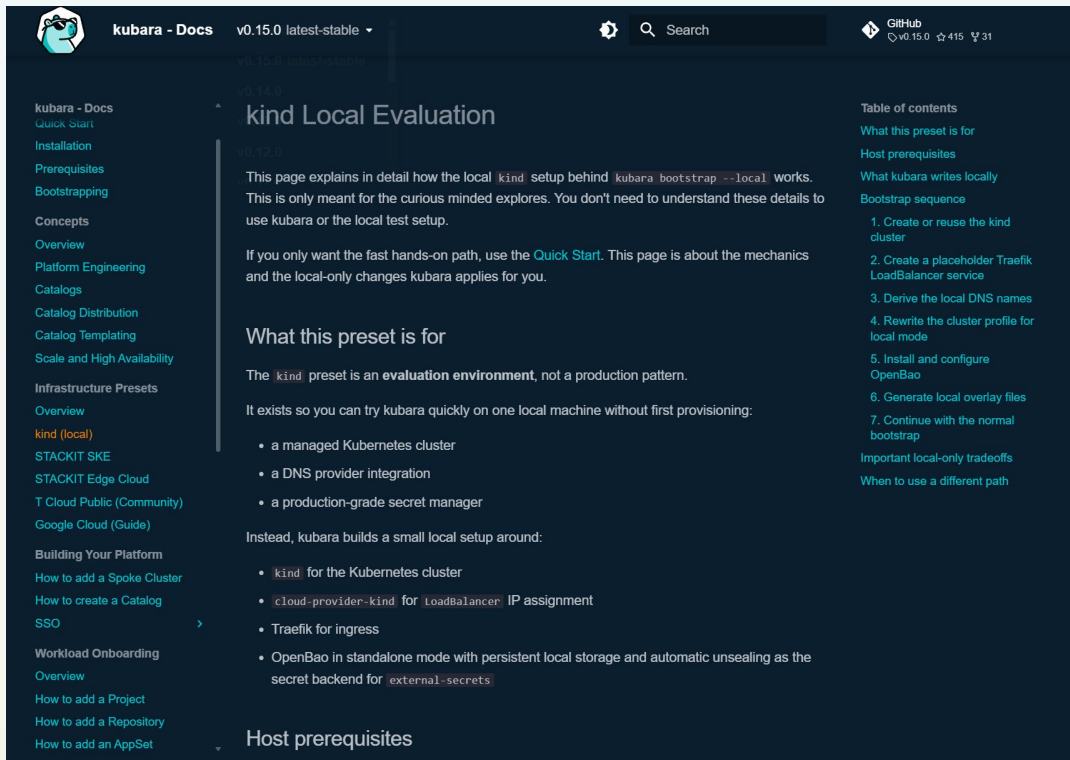

Release Cycle of CLI

- Starting Sept 9, we will switch to a **monthly release cycle** in line with the community calls (releases are done prior to Community Calls)
- <https://github.com/kubara-io/kubara/releases/tag/v0.15.0>

Release Cycle of Catalog

- Releases are done **automatically twice per week**
- If there are no upstream dependency updates, then we will have no update
- <https://github.com/kubara-io/catalogs>

Local Setup

The screenshot shows the kubara - Docs website. The top navigation bar includes the kubara logo, the title 'kubara - Docs', the version 'v0.15.0 latest-stable', a search icon, and a GitHub link. The left sidebar contains a navigation menu with categories like 'kubara - Docs', 'Infrastructure Presets', and 'Building Your Platform'. The main content area is titled 'kind Local Evaluation' and includes a table of contents, an introduction to the local kind setup, a list of prerequisites, and a list of host prerequisites.

kind Local Evaluation

This page explains in detail how the local `kind` setup behind `kubara bootstrap --local` works. This is only meant for the curious minded explores. You don't need to understand these details to use kubara or the local test setup.

If you only want the fast hands-on path, use the [Quick Start](#). This page is about the mechanics and the local-only changes kubara applies for you.

What this preset is for

The `kind` preset is an **evaluation environment**, not a production pattern.

It exists so you can try kubara quickly on one local machine without first provisioning:

- a managed Kubernetes cluster
- a DNS provider integration
- a production-grade secret manager

Instead, kubara builds a small local setup around:

- `kind` for the Kubernetes cluster
- `cloud-provider-kind` for `LoadBalancer` IP assignment
- Traefik for ingress
- OpenBao in standalone mode with persistent local storage and automatic unsealing as the secret backend for `external-secrets`

Host prerequisites

Table of contents

- What this preset is for
- Host prerequisites
- What kubara writes locally
- Bootstrap sequence
- 1. Create or reuse the kind cluster
- 2. Create a placeholder Traefik LoadBalancer service
- 3. Derive the local DNS names
- 4. Rewrite the cluster profile for local mode
- 5. Install and configure OpenBao
- 6. Generate local overlay files
- 7. Continue with the normal bootstrap
- Important local-only tradeoffs
- When to use a different path

Author Labels Projects Milestones Assignees Types F4 Newest

- ☐ [Feature]: Recommend ArgoCD webhook usage for instant refresh triggers feature request triage
#601 · schnodelbotz opened 4d ago
- ☐ [Bug]: In multi-hub repository, "generate" deletes disabled components (although enabled in "other" hub) bug triage
#600 · schnodelbotz opened 5d ago
- ☐ [Feature]: Add Crossplane as an optional component feature request good first issue (no AI)
#585 · tuunit opened 2w ago
- ☐ [Feature]: Gateway API feature request good first issue (no AI)
#575 · tuunit opened 3w ago
- ☐ [Docs]: Ensure availability of external resources/links documentation good first issue (no AI) 2
#574 · tuunit opened 3w ago
- ☐ [Feature]: GitHub / GitLab Pipeline Templates good first issue (no AI)
#573 · tuunit opened 3w ago
- ☐ [Bug]: ExternalDNS webhook provider needs an image repository bug triage 3
#554 · alexohneander opened 1mo ago
- ☐ [Question]: Secret handling during the bootstrapping phase help wanted question triage 3
#541 · alexohneander opened on Aug 5
- ☐ [Security]: Define External Secrets namespace isolation best practices architecture feature request
#414 · Matthiator opened on Jun 16
- ☐ [Feature]: Have fluxcd documentation and support and more charts feature request triage 6
#387 · suse-coder opened on Jun 8
- ☐ [Feature]: Support Argo CD repo auth via SSH/GitHub App and clarify PAT best practices documentation feature request intended 2
Feature #246 · Matthiator opened on Apr 20

Call to action: Adopters Listing

Did you already use kubara?

- We are searching for adopters who are willing to be listed in the adopters.md :)

Roadmap

GitOps Agnostic Support

Abstract away ArgoCD in kubara to make space for support of other tools like:

- FluxCD
- (Sveltos)

Gateway API Support

Hydration & Airgapped Compatibility

- Implement Helm Hydration
- Container Source Downloading / Bundling (Airgap solution)

Meet us!

CloudX Summit

GER - Wiesbaden - Registration closed, Invite only

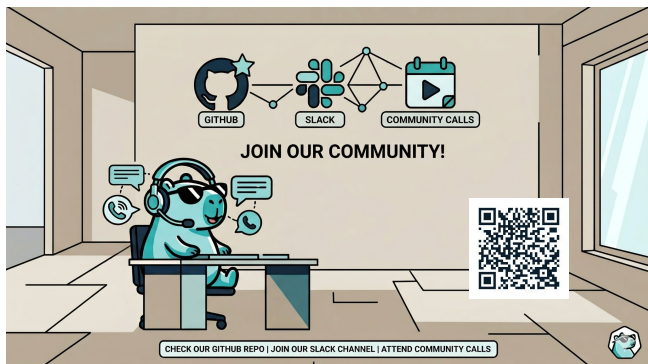

EdgeCase '26

NL - Hilversum - 24th September

OpenInfraDays

GER - Saarbrücken - 24th - 25th October
